ADAM J. REEP

SYSTEMS AND OPERATIONS ANALYST

Pittsburgh, PA · (412) 499-5325 · adamjreep@gmail.com
linkedin.com/in/adamjreep · Telecom · Security Systems · Automation · Open to remote, hybrid, or onsite

SUMMARY

Systems and operations analyst with about 20 years in IT, telecom, and security systems. Maps how work gets done, finds the money in billing and operations data, and replaces manual steps with automation. Led a telecom cost recovery program that reached more than $2.5M in yearly savings, moved 84 campuses to a new phone system, and migrated 1,332 cardholders to Genetec with zero errors.

EXPERIENCE

Miller Information Systems Allison Park, PA | Jan 2022 – Apr 2026

Field Systems Analyst

Security integrator installing CCTV, access control, and low-voltage systems.

- Moved 1,332 cardholder records from a Hirsch access system to Genetec with a UiPath automation and zero errors. No one needed a new badge and there were no support calls afterward.
- Set up a system to track paper service tickets from two VA hospitals, about 120 a month. Techs photographed the tickets, Google Drive OCR generated Google Docs containing the recognized text, and the parsed data went into a spreadsheet and a Trello board. Duplicate dispatches stopped, and the workload numbers were used in contract renegotiation.
- Wrote an Excel macro, with help from ChatGPT, that splits large quotes into as few purchase orders as possible under the client's $2,500 card limit. It cut the weekly quoting time from about 4 hours to 30 minutes.
- Built the tracking sheet for a 900-camera install, with an ID for every camera and a small AppSheet app the techs used in the field.
- Wrote PowerShell scripts to switch a laptop between DHCP and static IPs and to find new cameras on a subnet by ARP, so techs could set up cameras in parallel instead of one at a time.
- Installed, wired, and repaired access control (Genetec, Acre, RS2), CCTV (Avigilon, Hanwha, Pelco), and network equipment at client sites.
- Worked for months as the main field tech at two VA hospital campuses under a background-checked badge, much of it in network closets and patient-care areas.

Adam Makes Stuff Pittsburgh, PA | Feb 2021 – Present

Founder

- Runs a small woodworking and CNC shop: design, CAM toolpaths, milling, finishing, delivery, and bookkeeping.

Adhawk Solutions Pittsburgh, PA | Jan 2019 – Jan 2021

Operations and Telecom Analyst

Consultant to Mercy Behavioral Health, about 100 sites.

- Audited telecom bills line by line across 80+ sites and found billing errors, unused services, and lines that could be combined. The results fed a study on moving to IP phones.
- Built a Google Sheets ordering and restocking system for PPE across about 100 sites at the start of COVID. No site ran out.
- Priced a move from the on-site Avaya system to a cloud phone system and collected vendor quotes. The project was put on hold because of COVID.
- Gave second-level support for the main phone system and the separate phone lines at each care residence, including on-site repairs and voicemail resets.

Penn Forest Natural Burial Park Verona, PA | Aug 2018 – Jan 2019
Property and Facilities Coordinator

- Five-month role after EDMC's national restructuring: grounds and light construction work, burial-service logistics, and land restoration.

Education Management Corporation (EDMC) Pittsburgh, PA | Mar 2009 – Aug 2018
Telecom Analyst, *Senior Telecom Analyst*, *Network Provisioning Supervisor*, *Telecom Analyst IV*
About 129 campuses plus corporate offices.

- Ran a telecom cost recovery program across 129 campuses that reached more than $2.5M in yearly savings, mostly by finding and cancelling unused circuits, PRIs, and phone numbers.
- Checked carrier bills against actual phone system capacity and use, which accounted for over $1M of those savings.
- Coordinated the switch from one network carrier to redundant AT&T and CenturyLink circuits at 129 campuses: 258 circuit orders, building work where the new carriers had no lines in place, and cutovers with no campus downtime. Promoted to Network Provisioning Supervisor when it finished.
- Ran the project that moved 84 campuses from older TDM phone systems onto a central Avaya and Siemens VoIP system.
- Handled each cutover remotely or on site, trained campus staff, and supported each campus for two weeks after go-live before handing it to the support team.
- Supervised three analysts handling tier 2 support and project work.

BNY Mellon, via Robert J. DePaul Consulting Pittsburgh, PA | Apr 2008 – Mar 2009
IT Asset Refresh Lead (contract)

- Worked with BNY Mellon IT project managers on PC refreshes in Pittsburgh, Los Angeles, and Boston: identified end-of-life hardware, staged replacement PCs with user data and custom software, and ran deployments with about 25% travel.

The Art Institutes (Education Management Corp.) Pittsburgh, PA | Oct 2003 – Aug 2007
Desktop Support Analyst, *then Telecom and Desktop Support Analyst*

- Supported about 1,200 users, including design workstations, PCs, phones, accounts, and password resets, then took on telecom work as well.

SKILLS

Analysis: requirements gathering, process mapping, user stories, UAT, documentation, stakeholder meetings, rollout planning, data migration, end-user training

Data and reporting: Excel (VLOOKUP, pivot tables, VBA), Google Sheets, SQL queries and reports, Airtable, AppSheet, dashboards, telecom expense management, carrier bill audits

Automation and AI: UiPath, Power Automate, Zapier, Google Apps Script, PowerShell, Windows command line, Python (basic), Claude, Claude Code, ChatGPT, OCR

Telecom and networking: circuit ordering and provisioning (MPLS, PRI, POTS, SIP), FOC tracking, carrier escalations, Avaya, Siemens, VoIP/SIP, TCP/IP, DHCP, voice and data cabling

Security systems: Genetec Security Center, access control (Mercury, HID, Acre, RS2), CCTV (Avigilon, Hanwha, Pelco, Axis), Aiphone intercoms, nurse call

IT support: ticketing systems, ServiceNow, Trello, Active Directory (password resets and unlocks), Windows, PC hardware, on-call coverage

AI-assisted development: builds working tools by directing AI coding assistants (Claude, Claude Code, ChatGPT): defines requirements, tests results against real data, and iterates until it works

EDUCATION

Coursework in Business Management, Community College of Allegheny County, Pittsburgh, PA
OSHA 10 certified
